Description

The protein encoded by this gene is a cytokine that belongs to the tumor necrosis factor (TNF) ligand family. This cytokine is a ligand for receptors TNFRSF13B/TACI, TNFRSF17/BCMA, and TNFRSF13C/BAFFR. This cytokine is expressed in B cell lineage cells, and acts as a potent B cell activator. It has been also shown to play an important role in the proliferation and differentiation of B cells.

Application Notes

Titration of the BAFF antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 16-44 from the human protein was used as the immunogen for this BAFF antibody.

Storage

Aliquot the BAFF antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
