Description

CALM1/Calmodulin is a member of the EF-hand calcium-binding protein family. Calmodulin mediates the control of a large number of enzymes and other proteins by Ca^{2+} . Among the enzymes to be stimulated by the calmodulin- Ca^{2+} complex are a number of protein kinases and phosphatases. Together with CEP110 and centrin, is involved in a genetic pathway that regulates the centrosome cycle and progression through cytokinesis.

Application Notes

The stated application concentrations are suggested starting points. Titration of the CALM1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 107-132 from the human protein was used as the immunogen for the CALM1 antibody.

Storage

Aliquot the CALM1 antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
