## Description

CaM-kinase II (CAMK2) is a prominent Ser/Thr protein kinase in the central nervous system that may function in long-term potentiation and neurotransmitter release. Likely autophosphorylation of Thr-286 allows the kinase to switch from a calmodulin-dependent to a calmodulin-independent state. CAMK2 is composed of four different chains: alpha, beta, gamma, and delta. The different isoforms assemble into homo- or heteromultimeric holoenzymes composed of 8 to 12 subunits.

## Application Notes

Titration of the CAMK2G antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 309-338 from the human protein was used as the immunogen for this CAMK2G antibody.

## Storage

Aliquot the CAMK2G antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
