## Description

CD34 is a monomeric cell surface antigen with a molecular mass of approximately 110 KD. CD34 is expressed in humans in hematopoietic stem cells, vascular endothelium, and blasts from 30% of patients with acute myeloid and lymphocytic leukemia. The human CD34 gene spans 26 kb and has 8 exons, a structure quite similar to that of the murine gene. By Southern blot analysis of DNA from a panel of human x mouse somatic cell hybrids using a CD34 cDNA probe demonstrate that the gene for CD34 is located on human chromosome 1 in the 1q12---qter region. CD34 plays an important role in the formation of progenitor cells during both embryonic and adult hematopoiesis.

## Application Notes

Optimal dilution of the Cd34 antibody should be determined by the researcher.

## Immunogen

Recombinant rat protein (amino acids S170-L386) was used as the immunogen for the Cd34 antibody.

## Storage

After reconstitution, the Cd34 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
