## **Description**

This gene encodes a member of a homeobox transcription factor gene family similiar to the Drosophila distal-less gene. The encoded protein may play a role in bone development and fracture healing. Mutation in this gene, which is located in a tail-to-tail configuration with another member of the family on the long arm of chromosome 7, may be associated with split-hand/split-foot malformation.

### **Application Notes**

The stated application concentrations are suggested starting points. Titration of the DLX5 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

#### **Immunogen**

A portion of amino acids 100-128 from the human protein was used as the immunogen for the DLX5 antibody.

#### **Storage**

Aliquot the DLX5 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
