Description

DYRK1B is a member of the DYRK family of protein kinases. DYRK1B contains a bipartite nuclear localization signal and is found mainly in muscle and testis. The protein is proposed to be involved in the regulation of nuclear functions. Three isoforms of DYRK1B have been identified differing in the presence of two alternatively spliced exons within the catalytic domain. [provided by RefSeq].

Application Notes

Titration of the DYRK1B antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 377-405 from the human protein was used as the immunogen for this DYRK1B antibody.

Storage

Aliquot the DYRK1B antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
