## Description

Soluble epoxide hydrolase (sEH), or Epoxide hydrolase 2, is a bifunctional enzyme that in humans is encoded by the EPHX2 gene. It is mapped to 8p21.2-p21.1. This gene encodes a member of the epoxide hydrolase family. The protein, found in both the cytosol and peroxisomes, binds to specific epoxides and converts them to the corresponding dihydrodiols. Mutations in this gene have been associated with familial hypercholesterolemia. Alternatively spliced transcript variants have been described.

## Application Notes

Optimal dilution of the EPHX2 antibody should be determined by the researcher.

## Immunogen

Amino acids 505-543 (QHMEDWIPHLKRGHIEDCGHWTQMDKPTEVNQILIKWLD-human) were used as the immunogen for the EPHX2 antibody.

## Storage

After reconstitution, the EPHX2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
