Description

Retroviral envelope proteins mediate receptor recognition and membrane fusion during early infection. Endogenous envelope proteins may have kept, lost or modified their original function during evolution. This endogenous envelope protein has lost its original fusogenic properties.

Application Notes

Titration of the ERVK-9 antibody may be required due to differences in protocols and substrate sensitivity.

Immunogen

A portion of amino acids 636-669 from the human protein was used as the immunogen for the ERVK-9 antibody.

Storage

Aliquot the ERVK-9 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
