### Description

Nck-associated protein 1 is a protein that in humans is encoded by the NCKAP1 gene. By somatic cell hybrid analysis, the NCKAP1 gene was mapped to chromosome 2. NCKAP1 is a predicted type II transmembrane protein, with a C-terminal transmembrane domain. It was demonstrated that suppression of NCKAP1 expression using an antisense NCKAP1 oligonucleotide induced apoptosis of neuronal cells.

### Application Notes

Optimal dilution of the NCKAP1 antibody should be determined by the researcher.

## **Immunogen**

Amino acids S2-K201 from the human protein were used as the immunogen for the NCKAP1 antibody.

## **Storage**

After reconstitution, the NCKAP1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
