Description

This gene encodes a member of the CATERPILLER family of cytoplasmic proteins. The encoded protein, which contains an N-terminal pyrin domain, a NACHT domain, a NACHT-associated domain, and a C-terminus leucine-rich repeat region, functions as an attenuating factor of inflammation by suppressing inflammatory responses in activated monocytes. Alternatively spliced transcript variants encoding distinct isoforms have been described but the full-length nature of some of these has not been determined.

Application Notes

Titration of the NLRP12 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 183-212 from the human protein was used as the immunogen for this NLRP12 antibody.

Storage

Aliquot the NLRP12 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
