## Description

This gene is a member of the paired box (PAX) family of transcription factors. Members of this gene family typically contain a paired box domain, an octapeptide, and a paired-type homeodomain. These genes play critical roles during fetal development and cancer growth. The specific function of the paired box 7 gene is unknown but speculated to involve tumor suppression since fusion of this gene with a forkhead domain family member has been associated with alveolar rhabdomyosarcoma. Three transcript variants encoding different isoforms have been found for this gene.

## Application Notes

Titration of the PAX7 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 181-210 from the human protein was used as the immunogen for this PAX7 antibody.

## Storage

Aliquot the PAX7 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
