SOX11 antibody western blot analysis in K562 lysate

## Description

This intronless gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. The protein may function in the developing nervous system and play a role in tumorigenesis.

## Application Notes

Titration of the SOX11 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 103-132 from the human protein was used as the immunogen for this SOX11 antibody.

## Storage

Aliquot the SOX11 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
