SOX7 antibody western blot analysis in HepG2 lysate. Predicted molecular weight: 42/49 kDa (isoforms 1/2).

Description

This gene encodes a member of the SOX (SRY-related HMG-box) family of transcription factors involved in the regulation of embryonic development and in the determination of the cell fate. The encoded protein may act as a transcriptional regulator after forming a protein complex with other proteins. The protein may play a role in tumorigenesis. A similar protein in mice is involved in the regulation of the wingless-type MMTV integration site family (Wnt) pathway.

Application Notes

Titration of the SOX7 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 310-339 from the human protein was used as the immunogen for this SOX7 antibody.

Storage

Aliquot the SOX7 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
