Description

This gene is a member of the suppressor of variegation 3-9 homolog family and encodes a protein with a chromodomain and a C-terminal SET domain. This nuclear protein moves to the centromeres during mitosis and functions as a histone methyltransferase, methylating Lys-9 of histone H3. Overall, it plays a vital role in heterochromatin organization, chromosome segregation, and mitotic progression.

Application Notes

Titration of the SUV39H1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 79-108 from the human protein was used as the immunogen for this SUV39H1 antibody.

Storage

Aliquot the SUV39H1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
