Description

This gene encodes a member of the tubulin superfamily. The encoded protein localizes to the centrosome where it binds to microtubules as part of a complex referred to as the gamma-tubulin ring complex. The protein mediates microtubule nucleation and is required for microtubule formation and progression of the cell cycle. A pseudogene of this gene is found on chromosome 7.

Application Notes

Titration of the TUBG1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 23-51 from the human protein was used as the immunogen for this TUBG1 antibody.

Storage

Aliquot the TUBG1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
