Description

The protein encoded by this gene was identified by its interaction with the catalytic domain of protein kinase C-zeta. The encoded protein contains an actin-binding site and an ATP-binding site. It is most closely related to twinfilin (PTK9), a conserved actin monomer-binding protein.

Application Notes

The stated application concentrations are suggested starting points. Titration of the Twinfilin 2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 28-57 from the human protein was used as the immunogen for the Twinfilin 2 antibody.

Storage

Aliquot the Twinfilin 2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
