Description

The WNT gene family consists of structurally related genes which encode secreted signaling proteins. These proteins have been implicated in oncogenesis and in several developmental processes, including regulation of cell fate and patterning during embryogenesis. This gene is a member of the WNT gene family. It encodes a protein which shows 94% and 80% amino acid identity to the mouse Wnt5b protein and the human WNT5A protein, respectively. Alternative splicing of this gene generates 2 transcript variants.

Application Notes

Optimal dilution of the WNT5B antibody should be determined by the researcher.

Immunogen

Recombinant human protein (amino acids Q18-K218) was used as the immunogen for the WNT5B antibody.

Storage

After reconstitution, the WNT5B antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
