### Description

Isotype control antibodies are negative controls used to measure non-specific binding or background levels of a primary antibody in different cell types. They are not specific to any target in a cell, yet retain all non-specific characteristics of the antibodies they control.

### Application Notes

This rabbit isotype control monoclonal antibody shows no reactivity to tested lysates and tissues. Generally, the dilution used is matched to the dilution of the antibody being used to test for the protein of interest.

### Storage

Store the recombinant rabbit isotype control monoclonal antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
