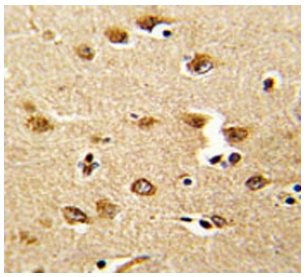
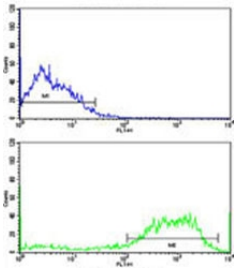
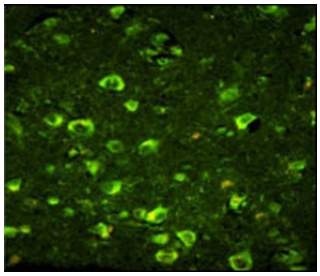
Western blot analysis of ABI1 antibody and human 1) MCF-7, 2) CEM, and 3) Jurkat lysate. Predicted molecular weight ~55 kDa, commonly observed at 55-65 kDa.



IHC analysis of FFPE human brain tissue stained with ABI1 antibody



Flow cytometric analysis of SK-Br-3 cells using ABI1 antibody (bottom histogram) compared to a negative control (top histogram). FITC-conjugated goat-anti-rabbit secondary Ab was used for the analysis.



Immunofluorescence analysis of ABI1 antibody with paraffin-embedded human brain tissue. Primary antibody was followed by FITC-conjugated goat anti-rabbit IgG (green).

Description

Abelson interactor 1 has been found to form a complex with EPS8 and SOS1, and is thought to be involved in the transduction of signals from Ras to Rac. In addition, this protein may play a role in the regulation of EGF-induced Erk pathway activation as well as cytoskeletal reorganization and EGFR signaling.

Application Notes

Titration of the ABI1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 81-108 from the human protein was used as the immunogen for this ABI1 antibody.

Storage

Aliquot the ABI1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
