## Description

Recognizes a protein of 102kDa, identified as Catenin, alpha-1. Catenins comprise a large family of  $\text{Ca}^{2+}$ -dependent, homotypic cell-cell adhesion molecules that play important roles in development, epithelial cell polarity and tumor progression. Alpha-Catenin is a key regulator of actin dynamics in cell-cell adhesion. During cell-cell adhesion, alpha-Catenin forms a heterodimer with beta-Catenin and links the cadherins to actin associated with the cytoskeleton. Alpha-Catenin also regulates the beta-Catenin signaling in various cells. It displays the tumor suppressor activity and is found to be down regulated in some forms of breast cancer.

## Application Notes

Optimal dilution of the Alpha Catenin antibody to be determined by the researcher.

## Immunogen

A human fusion protein was used as the immunogen for the Alpha Catenin antibody.

## Storage

Store the Alpha Catenin antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
