Description

HSP90 (heat shock protein 90) is a chaperone protein that assists other proteins to fold properly, stabilizes proteins against heat stress, and aids in protein degradation. It also stabilizes a number of proteins required for tumor growth, which is why HSP90 inhibitors are investigated as anti-cancer drugs. [\[Wiki\]](#)

Application Notes

Titration of the anti-HSP90 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

This anti-HSP90 antibody was produced from a rabbit immunized with a KLH conjugated synthetic peptide between 57-89 amino acids from the N-terminal region of human HSP90AA1.

Storage

Aliquot the anti-HSP90 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
