Description

The protein encoded by the ASNS gene is involved in the synthesis of asparagine. This gene complements a mutation in the temperature-sensitive hamster mutant ts11, which blocks progression through the G1 phase of the cell cycle at nonpermissive temperature.

Application Notes

Optimal dilution of the Asparagine Synthetase antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human Asparagine Synthetase / ASNS was used as the immunogen for the Asparagine Synthetase antibody.

Storage

Store the Asparagine Synthetase antibody at -20oC.
