Description

This gene encodes an arginyltransferase, an enzyme that is involved in posttranslational conjugation of arginine to N-terminal aspartate or glutamate residues. Conjugation of arginine to the N-terminal aspartate or glutamate targets proteins for ubiquitin-dependent degradation. Alternative splicing results in multiple transcript variants.

Application Notes

Optimal dilution of the ATE1 antibody should be determined by the researcher.

Immunogen

Recombinant human ATE1 protein (amino acids R56-A459) was used as the immunogen for the ATE1 antibody.

Storage

After reconstitution, the ATE1 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
