Description

Aurora B is a serine/threonine-protein kinase component of the chromosomal passenger complex (CPC), a complex that acts as a key regulator of mitosis. The CPC complex has essential functions at the centromere in ensuring correct chromosome alignment and segregation and is required for chromatin-induced microtubule stabilization and spindle assembly. Involved in the bipolar attachment of spindle microtubules to kinetochores and is a key regulator for the onset of cytokinesis during mitosis. Required for central/midzone spindle assembly and cleavage furrow formation. [UniProt]

Application Notes

Optimal dilution of the AURKB antibody should be determined by the researcher.

Immunogen

Amino acids 89-251 were used as the immunogen for this AURKB antibody.
