IHC staining of FFPE human tonsil with Bcl10 antibody (clone 151). HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.

Description

BCL10, with an N-terminal caspase recruitment domain (CARD), is found in a number of apoptotic regulatory molecules. It was identified through its direct involvement in t(1;14) of mucosa-associated lymphoid tissue (MALT) lymphoma. Expression of BCL10 was shown to induce NF14) translocation, while 55% of MALT lymphomas lacking this translocation exhibited the same labeling pattern, although at a much lower level.

Application Notes

Optimal dilution of the Bcl10 antibody should be determined by the researcher.

Immunogen

A recombinant human partial protein (amino acids 122-168) was used as the immunogen for this Bcl10 antibody.

Storage

Store the Bcl10 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
