Description

Beta-adrenergic receptors mediate the catecholamine- induced activation of adenylate cyclase through the action of G proteins. The beta-2-adrenergic receptor binds epinephrine with an approximately 30-fold greater affinity than it does norepinephrine. [UniProt]

Application Notes

Optimal dilution of the Beta 2 Adrenergic Receptor antibody should be determined by the researcher.

Immunogen

A synthetic peptide from human beta 2 Adrenergic Receptor was used as the immunogen for the Beta 2 Adrenergic Receptor antibody.

Storage

Store the Beta 2 Adrenergic Receptor antibody at -20oC.
