## Description

CD15 plays a role in mediating phagocytosis, bactericidal activity, and chemotaxis. It is present on 95% of granulocytes including neutrophils and eosinophils and to a lesser degree on monocytes. In addition, CD15 is expressed in Reed-Sternberg cells and some epithelial cells. CD15 antibody is very useful in the identification of Hodgkin s disease. CD15 is occasionally expressed in large cell lymphomas of both B and T phenotypes which otherwise have a quite distinct histological appearance.

For extensively published CD15 detection in Hodgkin lymphoma and leukocyte differentiation studies, see our [CD15 Antibody / Leukocyte Differentiation Antigen Antibody](#) page featuring clone Leu-M1/MMA with IHC, IF, and FACS validation data.

## Application Notes

Optimal dilution of the CD15 antibody should be determined by the researcher.

## Immunogen

Human U937 cells were used as the immunogen for the CD15 antibody.

## Storage

Store the CD15 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
