## Description

CD15 plays a role in mediating phagocytosis, bactericidal activity, and chemotaxis. It is present on >95% of granulocytes including neutrophils and eosinophils and to a lesser degree on monocytes. In addition, CD15 is expressed in Reed-

Sternberg cells and some epithelial cells. CD15 antibody is very useful in the identification of Hodgkin's disease. CD15 is occasionally expressed in large cell lymphomas of both B and T phenotypes which otherwise have a quite distinct histological appearance.

## **Application Notes**

Optimal dilution of the CD15 antibody should be determined by the researcher.

## **Immunogen**

Purified human neutrophils were used as the immunogen for the CD15 antibody.

## **Storage**

Store the CD15 antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
