Description

CD28 Antibody C28/76 recognizes a glycoprotein of 44-88kDa, which is identified as CD28. It is the critical T-cell co-stimulatory receptor which provides to the cell the important second activation signal by binding CD80 and CD86 that are expressed by antigen presenting cells. Besides its co-stimulation role, CD28 functions in preventing T-cells from anergic hyporesponsive state or from undergoing premature apoptotic cell death. CD28 is also expressed on human fetal NK cells and some NK cell lines, whereas on murine NK cells the CD28 expression is much broader.

For additional CD28 detection studies, see our CD28 Antibody CB28, which has been cited in multiple scientific publications.

Application Notes

Optimal dilution of the CD28 Antibody C28/76 should be determined by the researcher.

Immunogen

Recombinant human CD28 protein was used as the immunogen for the CD28 antibody.

Storage

Store the CD28 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
