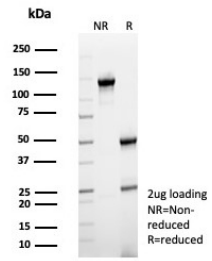
CD64 Antibody Human Tonsil Tissue IHC. Immunohistochemistry staining of FFPE human tonsil tissue using CD64 antibody (clone FCGR1A/7498) at 2ug/ml. HIER: boil tissue sections in pH 9 10mM Tris with 1mM EDTA for 20 min and allow to cool before testing.



SDS-PAGE analysis of purified, BSA-free CD64 antibody (clone FCGR1A/7498) as confirmation of integrity and purity.

Description

CD64 antibody specifically detects CD64, a surface glycoprotein with high affinity for monomeric IgG, is expressed constitutively on monocytes and macrophages, and can be induced in neutrophils subsequent to IFN-gamma stimulation.

Researchers studying Fc receptor signaling, monocyte activation, and antibody-dependent immune responses may also benefit from the CD64 Antibody / High-Affinity Fc Gamma Receptor page featuring the widely published clone 10.1 and flow cytometry validation in PBMC immune cell populations.

Application Notes

Optimal dilution of the CD64 antibody should be determined by the researcher.

Immunogen

Recombinant human FCGR1A protein was used as the immunogen for the CD64 antibody.

Storage

Aliquot the CD64 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
