

# **CD80 Antibody [clone C80/2725] (V8234)**

Catalog No.	Formulation	Size
V8234-100UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced) and 0.05% sodium azide	100 ug
V8234-20UG	0.2 mg/ml in 1X PBS with 0.1 mg/ml BSA (US sourced) and 0.05% sodium azide	20 ug
V8234SAF-100UG	1 mg/ml in 1X PBS; BSA free, sodium azide free	100 ug

## **Bulk quote request**

Availability	1-3 business days
Species Reactivity	Human
Format	Purified
Clonality	Monoclonal (mouse origin)
Isotype	Mouse IgG2b, kappa
Clone Name	C80/2725
Purity	Protein G affinity chromatography
UniProt	P33681
Applications	ELISA (order BSA-free Format For Coating) :
Limitations	This CD80 antibody is available for research use only.

Analysis of HuProt(TM) microarray containing more than 19,000 full-length human proteins using CD80 antibody (clone C80/2725). These results demonstrate the foremost specificity of the C80/2725 mAb. Z- and S- score: The Z-score represents the strength of a signal that an antibody (in combination with a fluorescently-tagged anti-IgG secondary Ab) produces when binding to a particular protein on the HuProt(TM) array. Z-scores are described in units of standard deviations (SD's) above the mean value of all signals generated on that array. If the targets on the HuProt(TM) are arranged in descending order of the Z-score, the S-score is the difference (also in units of SD's) between the Z-scores. The S-score therefore represents the relative target specificity of an Ab to its intended target.

## **Description**

T cell proliferation and lymphokine production are triggered by occupation of the TCR by antigen, followed by a

costimulatory signal that is delivered by a ligand expressed on antigen presenting cells. The B7-related cell surface proteins CD80 (B7-1) and CD86 (B7-2) are expressed on antigen presenting cells bind the homologous T cell receptors CTLA-4 (cytotoxic T lymphocyte-associated protein-4) and CD28 and trigger costimulatory signals for optimal T cell activation. CTLA-4 shares 31% overall amino acid identity with CD28 and it has been proposed that CD28 and CTLA-4 are functionally redundant. SLAM is a novel receptor on T cells that, when engaged, potentiates T cell expansion in a CD28-independent manner. B7, also designated BB1, is another ligand or counter receptor for CD28 and CTLA-4 that is expressed on the antigen-presenting cell.

### **Application Notes**

Optimal dilution of the CD80 antibody should be determined by the researcher.

## **Immunogen**

A recombinant human partial protein (amino acids 35-142) was used as the immunogen for this CD80 antibody.

#### **Storage**

Store the CD80 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
