## Description

Recognizes a protein of 25kDa, identified as mouse Thy-1 (also known as CD90). It is a glycosyl phosphatidylinositol-anchored surface glycoprotein. CD90 is a member of the immunoglobulin superfamily. It may contribute to inhibition of proliferation/differentiation of hematopoietic stem cells and neuron memory formation in the CNS. It consists of a single Ig domain (112 amino acids; 25-35kDa) inserted into the cell membrane via a GPI anchor. Thy-1 is expressed mainly on brain and lymphoid tissues including thymocytes, Peripheral T-cells, and some intraepithelial T-lymphocytes. Thy-1 may play a role in T cell activation, development and function of nervous system, and apoptosis.

## Application Notes

Optimal dilution of the CD90 antibody should be determined by the researcher.

## Immunogen

Mouse EL-4 T cell lymphoma cells were used as the immunogen for the CD90 antibody.

## Storage

Store the CD90 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
