Description

CDC20 is an activating regulatory factor for the APC/C (anaphase promoting complex/cyclosome). It activates the ubiquitination activity of the APC/C. CDC20 confers a strict destruction-box (D-box) dependence on APC. Levels of CDC20, as well as its binding to APC, peak in mitosis and decrease drastically at early G1.

Application Notes

Titration of the CDC20 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 57-84 from the human protein was used as the immunogen for this CDC20 antibody.

Storage

Aliquot the CDC20 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
