SDS-PAGE Analysis of Purified, BSA-Free CDw78 Antibody (clone DF1588). Confirmation of Integrity and Purity of the Antibody.

Description

This mAb reacts with a carbohydrate determinant, identified as CDw78 (Workshop V; Code CDw78.2). The epitope recognized by this mAb and Leu21 is the same. It is present on some immature and some peripheral blood B cells, and some B cell lines. Its expression is increased after B-cell activation in vitro. CDw78 is also found on tissue macrophages and on epithelial cells, but not on T cells, NK cells, monocytes, granulocytes and myeloid tissues. It appears that CDw78 is a determinant on a major histocompatibility complex (MHC) class II subpopulation.

Application Notes

Optimal dilution of the CDw78 antibody should be determined by the researcher.

Immunogen

Human leukocytes were used as the immunogen for the CDw78 antibody.

Storage

Store the CDw78 antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
