Description

Chk2 is a serine/threonine-protein kinase which is required for checkpoint-mediated cell cycle arrest, activation of DNA repair and apoptosis in response to the presence of DNA double-strand breaks. May also negatively regulate cell cycle progression during unperturbed cell cycles. Following activation, phosphorylates numerous effectors preferentially at the consensus sequence [L-X-R-X-X-S/T]. Regulates cell cycle checkpoint arrest through phosphorylation of CDC25A, CDC25B and CDC25C, inhibiting their activity. [UniProt]

Application Notes

Optimal dilution of the Chk2 antibody should be determined by the researcher.

Immunogen

Amino acids KLLVVDPKARFTTEEALRHPWLQDEDMKRKFQDL of human Chk2/CHEK2 were used as the immunogen for the Chk2 antibody.

Storage

After reconstitution, the Chk2 antibody can be stored for up to one month at 4oC. For long-term, aliquot and store at -20oC. Avoid repeated freezing and thawing.
