Description

Visual system homeobox 2 is a protein that in humans is encoded by the VSX2 gene. This gene encodes a homeobox protein originally described as a retina-specific transcription factor. Mutations in this gene are associated with microphthalmia, cataracts and iris abnormalities. In situ hybridization to human fetal retinal sections detected CHX10 expression in retinal neuroblasts at all stages examined. Human CHX10 is expressed in progenitor cells of the developing neuroretina and in the inner nuclear layer of the mature retina.

Application Notes

Optimal dilution of the CHX10 antibody should be determined by the researcher.

Immunogen

A recombinant human protein corresponding to amino acids A249-A361 was used as the immunogen for the CHX10 antibody.

Storage

After reconstitution, the CHX10 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
