Description

This mAb recognizes mouse DNDR-1, which is also known as CLEC9A, which is a highly specific marker of the CD8a+ and the CD103+ DC subsets, as well as a receptor able to recognize a preformed signal exposed on necrotic cells. In

peripheral blood, it is highly restricted on the surface of BDCA31(+) dendritic cells and on a small subset of CD14(+) and CD16(-) monocytes.

Application Notes

Optimal dilution of the CLEC9A antibody should be determined by the researcher.

Immunogen

RBL-2H3 cells expressing mouse CLEC9A fused to an HA epitope.

Storage

Store the CLEC9A antibody at 2-8oC (with azide) or aliquot and store at -20oC or colder (without azide).
