Description

Dihydropyrimidinase-related protein 3 is an enzyme that in humans is encoded by the DPYSL3 gene. This gene encodes a protein that belongs to the TUC (TOAD-64/Ulip/CRMP) family of proteins. Members of this family are phosphoproteins that function in axonal guidance and neuronal differentiation during development and regeneration of the nervous system. A mutation in the human gene is associated with amyotrophic lateral sclerosis. Alternative splicing results in multiple transcript variants encoding different isoforms.

Application Notes

Optimal dilution of the Crmp4 antibody should be determined by the researcher.

Immunogen

Amino acids DAVKIVSAK^{NH}QSV^A were used as the immunogen for the Crmp4 antibody.

Storage

After reconstitution, the Crmp4 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
