Description

This enzyme is involved in the de novo synthesis of CTP, a precursor of DNA, RNA and phospholipids. Catalyzes the ATP-dependent amination of UTP to CTP with either L-glutamine or ammonia as a source of nitrogen. This enzyme and its product, CTP, play a crucial role in the proliferation of activated lymphocytes and therefore in immunity. [UniProt]

Application Notes

Optimal dilution of the CTPS1 antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human CTP synthase protein was used as the immunogen for the CTPS1 antibody.

Storage

Store the CTPS1 antibody at -20oC.
