Description

Cathepsin D / CTSD is an acid protease active in intracellular protein breakdown. Plays a role in APP processing following cleavage and activation by ADAM30 which leads to APP degradation. Involved in the pathogenesis of several diseases such as breast cancer and possibly Alzheimer disease.

This antibody can be compared with our [Cathepsin D Antibody / CTSD Antibody](#) (clone CTSD/3276) as a central reference for consistent CTSD detection across multiple assay formats.

Application Notes

Optimal dilution of the CTSD antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human Cathepsin D / CTSD was used as the immunogen for the CTSD antibody.

Storage

Store the CTSD antibody at -20oC.
