#### **Description**

DNA-binding death effector domain-containing protein 2 may play a critical role in death receptor-induced apoptosis and may target CASP8 and CASP10 to the nucleus. May regulate degradation of intermediate filaments during apoptosis. May play a role in the general transcription machinery in the nucleus and might be an important regulator of the activity of GTF3C3.

### **Application Notes**

Titration of the DEDD2 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

### **Immunogen**

A portion of amino acids 43-75 from the human protein was used as the immunogen for the DEDD2 antibody.

## **Storage**

Aliquot the DEDD2 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
