Desmin antibody staining of human hepatocarcinoma tissue

Description

Desmin are class-III intermediate filaments found in muscle cells. In adult striated muscle they form a fibrous network connecting myofibrils to each other and to the plasma membrane from the periphery of the Z-line structures. [UniProt]

Application Notes

The stated application concentrations are suggested starting amounts. Titration of the Desmin antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 1-30 from the human protein was used as the immunogen for this Desmin antibody.

Storage

Store at 4oC for up to one month. For long term, aliquot the Desmin antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
