## Description

Antagonizes canonical Wnt signaling by inhibiting LRP5/6 interaction with Wnt and by forming a ternary complex with the transmembrane protein KREMEN that promotes internalization of LRP5/6. DKKs play an important role in vertebrate development, where they locally inhibit Wnt regulated processes such as antero- posterior axial patterning, limb development, somitogenesis and eye formation. In the adult, Dkks are implicated in bone formation and bone disease, cancer and Alzheimer disease. [UniProt]

## Application Notes

Titration of the DKK1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

This DKK1 antibody was produced from a rabbit immunized with a recombinant protein of human DKK1.

## Storage

Aliquot the DKK1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
