Western blot testing of mouse skeletal muscle with Dysferlin antibody. Predicted molecular weight ~230 kDa.

Description

Dysferlin is a key calcium ion sensor involved in the Ca²⁺-triggered synaptic vesicle-plasma membrane fusion. Plays a role in the sarcolemma repair mechanism of both skeletal muscle and cardiomyocytes that permits rapid resealing of membranes disrupted by mechanical stress. [UniProt]

Application Notes

Optimal dilution of the Dysferlin antibody should be determined by the researcher.

Immunogen

A synthetic peptide specific to human Dysferlin / DYSF was used as the immunogen for the Dysferlin antibody.

Storage

Store the Dysferlin antibody at -20oC.
