Description

This MAb recognizes a protein of 170kDa, identified as EGFR. EGFR is type I receptor tyrosine kinase with sequence homology to erbB-1, -2, -3 -4 or HER-1, -2, -3 -4. It binds to Epidermal Growth Factor (EGF), Transforming Growth Factor- α (TGF- α), Heparin-binding EGF (HB-EGF), amphiregulin, betacellulin and epiregulin. EGFR is overexpressed in tumors of breast, brain, bladder, lung, gastric, head & neck, esophagus, cervix, vulva, ovary, and endometrium. It is predominantly present in squamous cell carcinomas.

Application Notes

Titering of the EGF Receptor antibody may be required for optimal performance.

Immunogen

Amino acids 985-996 from the human protein were used as the immunogen for the EGF Receptor antibody.

Storage

Store the EGF Receptor antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
