## Description

The epidermal growth factor receptor is the cell-surface receptor for members of the epidermal growth factor family (EGF-family) of extracellular protein ligands. The epidermal growth factor receptor is a member of the ErbB family of receptors, a subfamily of four closely related receptor tyrosine kinases: EGFR (ErbB-1), HER2/c-neu (ErbB-2), Her 3 (ErbB-3) and Her 4 (ErbB-4). Mutations affecting EGFR expression or activity could result in cancer.

Explore our [EGFR Antibody \(31G7\)](#) page for a broader view of EGFR expression and extensively validated antibody performance across applications.

## Application Notes

Titration of the Epidermal Growth Factor Receptor antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 1070-1099 from the human protein was used as the immunogen for this Epidermal Growth Factor Receptor antibody.

## Storage

Aliquot the Epidermal Growth Factor Receptor antibody and store frozen at -20°C or colder. Avoid repeated freeze-thaw cycles.
