

FGF23 Antibody (R32319)

Catalog No.	Formulation	Size
R32319	0.5mg/ml if reconstituted with 0.2ml sterile DI water	100 ug

[Bulk quote request](#)

Availability	1-3 business days
Species Reactivity	Mouse
Format	Antigen affinity purified
Clonality	Polyclonal (rabbit origin)
Isotype	Rabbit IgG
Purity	Antigen affinity
Buffer	Lyophilized from 1X PBS with 2.5% BSA and 0.025% sodium azide
UniProt	Q9EPC2
Applications	Western Blot : 0.1-0.5ug/ml
Limitations	This FGF23 antibody is available for research use only.

Western blot testing of mouse testis lysate with FGF23 antibody. Predicted molecular weight 28~32 kDa.

Description

Fibroblast growth factor 23 is a protein that in humans is encoded by the FGF23 gene. This gene encodes a member of the fibroblast growth factor family of proteins, which possess broad mitogenic and cell survival activities and are involved in a variety of biological processes. The product of this gene regulates phosphate homeostasis and transport in the kidney. The full-length, functional protein may be deactivated via cleavage into N-terminal and C-terminal chains. Mutation of this cleavage site causes autosomal dominant hypophosphatemic rickets (ADHR). Mutations in this gene are also associated with hyperphosphatemic familial tumoral calcinosis (HFTC).

Application Notes

Optimal dilution of the FGF23 antibody should be determined by the researcher.

Immunogen

Amino acids 48-251 of mouse FGF23 were used as the immunogen for the FGF23 antibody.

Storage

After reconstitution, the FGF23 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
