Description

FLI1 is a sequence-specific transcriptional activator. It recognizes the DNA sequence 5'-C[CA]GGAAGT-3'.

Explore our FLI1 Antibody / ETS Transcription Factor Marker page for additional validation data and research applications involving Ewing sarcoma biology, hematopoietic differentiation, endothelial signaling, and ETS family transcriptional regulation pathways.

Application Notes

Titration of the FLI1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

Immunogen

A portion of amino acids 299-328 from the human protein was used as the immunogen for this FLI1 antibody.

Storage

Aliquot the FLI1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
