## Description

FLI1 is a sequence-specific transcriptional activator. It recognizes the DNA sequence 5'-C[CA]GGAAGT-3'.

Explore our FLI1 Antibody / ETS Transcription Factor Marker page for additional validation data and research applications involving Ewing sarcoma biology, hematopoietic differentiation, endothelial signaling, and ETS family transcriptional regulation pathways.

## Application Notes

Titration of the FLI1 antibody may be required due to differences in protocols and secondary/substrate sensitivity.

## Immunogen

A portion of amino acids 52-80 from the human protein was used as the immunogen for this FLI1 antibody.

## Storage

Aliquot the FLI1 antibody and store frozen at -20oC or colder. Avoid repeated freeze-thaw cycles.
