Description

Fibronectin type III domain-containing protein 5, the precursor of irisin, is a protein that is encoded by the FNDC5 gene. This gene encodes a secreted protein that is released from muscle cells during exercise. The encoded protein may participate in the development of brown fat. Translation of the precursor protein initiates at a non-AUG start codon at a position that is conserved as an AUG start codon in other organisms. Alternative splicing results in multiple transcript variants.

Application Notes

Optimal dilution of the FNDC5 antibody should be determined by the researcher.

Immunogen

Human recombinant protein (amino acids D32-E143) was used as the immunogen for the FNDC5 antibody.

Storage

After reconstitution, the FNDC5 antibody can be stored for up to one month at 4°C. For long-term, aliquot and store at -20°C. Avoid repeated freezing and thawing.
